

```

from bottle import default_app, route, post, get, template

#this is all for the bmi page with it redirecting to form.html when user
clicks the bmi link
@route('/bmi')
def basicForm():
    return template("form.html")
#post only works when form is filled out, you cannot go to result.html
unless you first go to form.html. This post will direct the user to the
results page once form is completed
@post('/convert')
def convert():
    return template("result.html")
#This is for the black belt, I have commented it out because it was
interfering with the program. This serves the same purpose as the bmi
route.
#@route('/bmi_blackbelt')
#def basicForm1():
#    return template("bbform.html")
#This is for the black belt, I have commented it out because it was
interfering with the program. This serves the same purpose as the bmi
post.
#@post('/convert1')
#def convert1():
#    return template("bbresult.html")

#Used to display source code
@route('/showFile/<fileName>')
def showFile(fileName):
    return template("showFile.html", fileName = fileName)

#application variable gets default_app() function
application = default_app()

```
